

Derek Macharia

Junior Software Developer | Flutter · React · Node.js · Firebase

+254 792 612 021 | derrickmacharia2022@gmail.com | github.com/J-Derek | Nairobi, Kenya

PROFESSIONAL PROFILE

Computer Science student at Daystar University building production-focused mobile and web applications with Flutter and JavaScript. Currently developing Kiu Fresh, a Flutter platform digitizing water delivery with M-Pesa integration and real-time order tracking, and AutoBite, a digital meal card system deployed during an industrial attachment at KPLC. Independently identifies real-world problems, pitches solutions to stakeholders, and ships working software. Brings additional hands-on experience in network installation, hardware repair, and IT support from enterprise and commercial environments.

PROJECTS

Kiu Fresh — Water Delivery App

[Flutter](#) · [Dart](#) · [Firebase](#) · [M-Pesa API](#) · 2025 – Present · github.com/J-Derek (private)

- Identified a manual phone-based ordering process at a local water delivery business near Daystar University; pitched and secured approval to build a digital replacement.
- Developing a Flutter mobile app enabling customer registration, order placement by hostel/location, quantity selection, and M-Pesa or cash payment.
- Implementing real-time order tracking and an admin dashboard for the business owner to manage incoming orders and delivery status.
- Integrated M-Pesa STK Push for automated in-app payment confirmation and order status updates.

AutoBite — Digital Meal Card System

[Flutter](#) · [Node.js](#) · [Supabase](#) · [React](#) · [JWT Auth](#) · 2025 – Present · github.com/J-Derek (private)

- Built during an industrial attachment at KPLC Training School (IESR) to digitize the staff cafeteria meal card system for daily meal management.
- Developed a Flutter mobile app with QR code generation and scanning for meal redemption, replacing a manual paper-based system.
- Built a Node.js backend with JWT authentication and a Supabase database tracking meal balances, scan logs, and transaction history.
- Developed a React/Vite web dashboard for administrators to manage staff accounts, meal allocations, and usage reports.

AccessPro Daystar — Campus Transport Booking

[Flutter](#) · [Dart](#) · [Firebase](#) · 2025 · github.com/J-Derek (private)

- Built a Flutter mobile app enabling Daystar University students to book seats on official buses running between the Athi River and Nairobi campuses.
- Implemented booking flow with seat selection, schedule display, and booking confirmation — replacing a manual phone-in or walk-up process.
- Designed for the specific two-campus context, with role-based access for students and transport administrators.

CrochetHub — Crochet Community & Marketplace

[Flutter](#) · [Dart](#) · [Firebase](#) · 2025 · github.com/J-Derek (private)

- Developed a Flutter app combining a social community and marketplace for crochet creators and buyers.
- Implemented product listings, community posts, and user profiles enabling artisans to showcase and sell their work within a single platform.
- Designed to serve an underserved niche — bringing together a fragmented creative community into one digital space.

TheSalon — Salon Booking App

[Flutter](#) · [Dart](#) · [Firebase](#) · 2025 · github.com/J-Derek (private)

- Built a Flutter appointment booking application for salons, allowing customers to browse services, select stylists, and book time slots.
- Implemented booking management and scheduling logic for salon staff to view and manage daily appointments.

Onyx — Personal Multimedia Player

[Flutter](#) · [Dart](#) · 2025 · github.com/J-Derek (private)

- Developed a personal Flutter application for streaming and playing music, movies, and multimedia content from a single unified interface.
- Built for personal use — demonstrates ability to scope, design, and ship a complete application independently without an external client.

WORK EXPERIENCE

Industrial Attachment — Networking & IT — KPLC Training School, IESR

May 2025 – July 2025

- Installed and configured network infrastructure across the training facility, including structured cabling, switch setup, and workstation connectivity.
- Diagnosed and resolved hardware, software, and connectivity faults independently — handling first-line troubleshooting without escalation to senior staff.
- Worked hands-on with enterprise networking equipment in a live national utility environment, including routing, patch panels, and IT maintenance workflows.
- Concurrently developed AutoBite, a digital meal card system for IESR staff, applying software development skills directly within the attachment environment.

Cyber Café Manager — Royal Cyber Café, Nairobi

May 2024 – September 2024

- Managed daily operations of an 11-workstation cyber café, overseeing staff coordination, customer support, and full technical system reliability.
- Maintained consistent uptime across all workstations by diagnosing and resolving OS errors, peripheral failures, and network faults.
- Built a weekly maintenance checklist that reduced repeat software faults and cut time spent on avoidable repairs.

Computer Repair Assistant — Royal Cyber Café, Nairobi

2024 – 2025

- Repaired customer desktops and laptops regularly — covering RAM replacement, OS reinstallation (Windows), data recovery, and hardware fault diagnosis.
- Performed full OS installations and software configuration, ensuring devices were returned in clean working condition.
- Explained technical findings clearly to non-technical customers, resulting in repeat business and word-of-mouth referrals.

Freelance Technical Writer — Self-Employed

2024 – Present

- Produced process documentation and technical scripts for small business clients covering IT procedures and operational workflows.
- Managed client briefs and delivery timelines independently with consistent on-time delivery.

EDUCATION

Bachelor of Science — Computer Science

Daystar University, Nairobi · 2022 – Present

Relevant coursework: Data Structures, Object-Oriented Programming, Web Development, Databases, Computer Networks, Software Engineering

Kenya Certificate of Secondary Education (K.C.S.E)

Kigumo Bendera High School · 2018 – 2021 · Grade: B

SKILLS & TECHNOLOGIES

Mobile & Web: Flutter · Dart · React · Next.js · Electron · Node.js · HTML · CSS · JavaScript

Backend & Databases: Firebase · Supabase · SQLite · SQL · JWT Authentication · REST APIs

Tools & Concepts: Git · GitHub · VS Code · OOP · State Management · API Integration · CRUD Operations · Debugging · Version Control

IT & Networking: Hardware Troubleshooting · OS Installation (Windows) · Network Setup · LAN/WAN · TCP/IP · System Maintenance

LANGUAGES

English (Fluent) Swahili (Fluent)
